# Zapp IPTV - UX Scenario

**App ID:** com.zappiptv.tv  **Version:** 1.0.0  **Type:** web app (webOS 5.0+, 1280x720 rendered full screen)

Zapp IPTV is a video player for the user's own IPTV playlists (M3U or Xtream Codes). It does not provide content: it ships with a sample playlist of free-to-air public Brazilian channels streamed by the channels themselves, so it can be tested without any account.

## Flow

Launch → intro animation (about 3 s, any key skips) → Home → Live TV → select a channel → Player. Settings is reachable from the gear icon in the header.

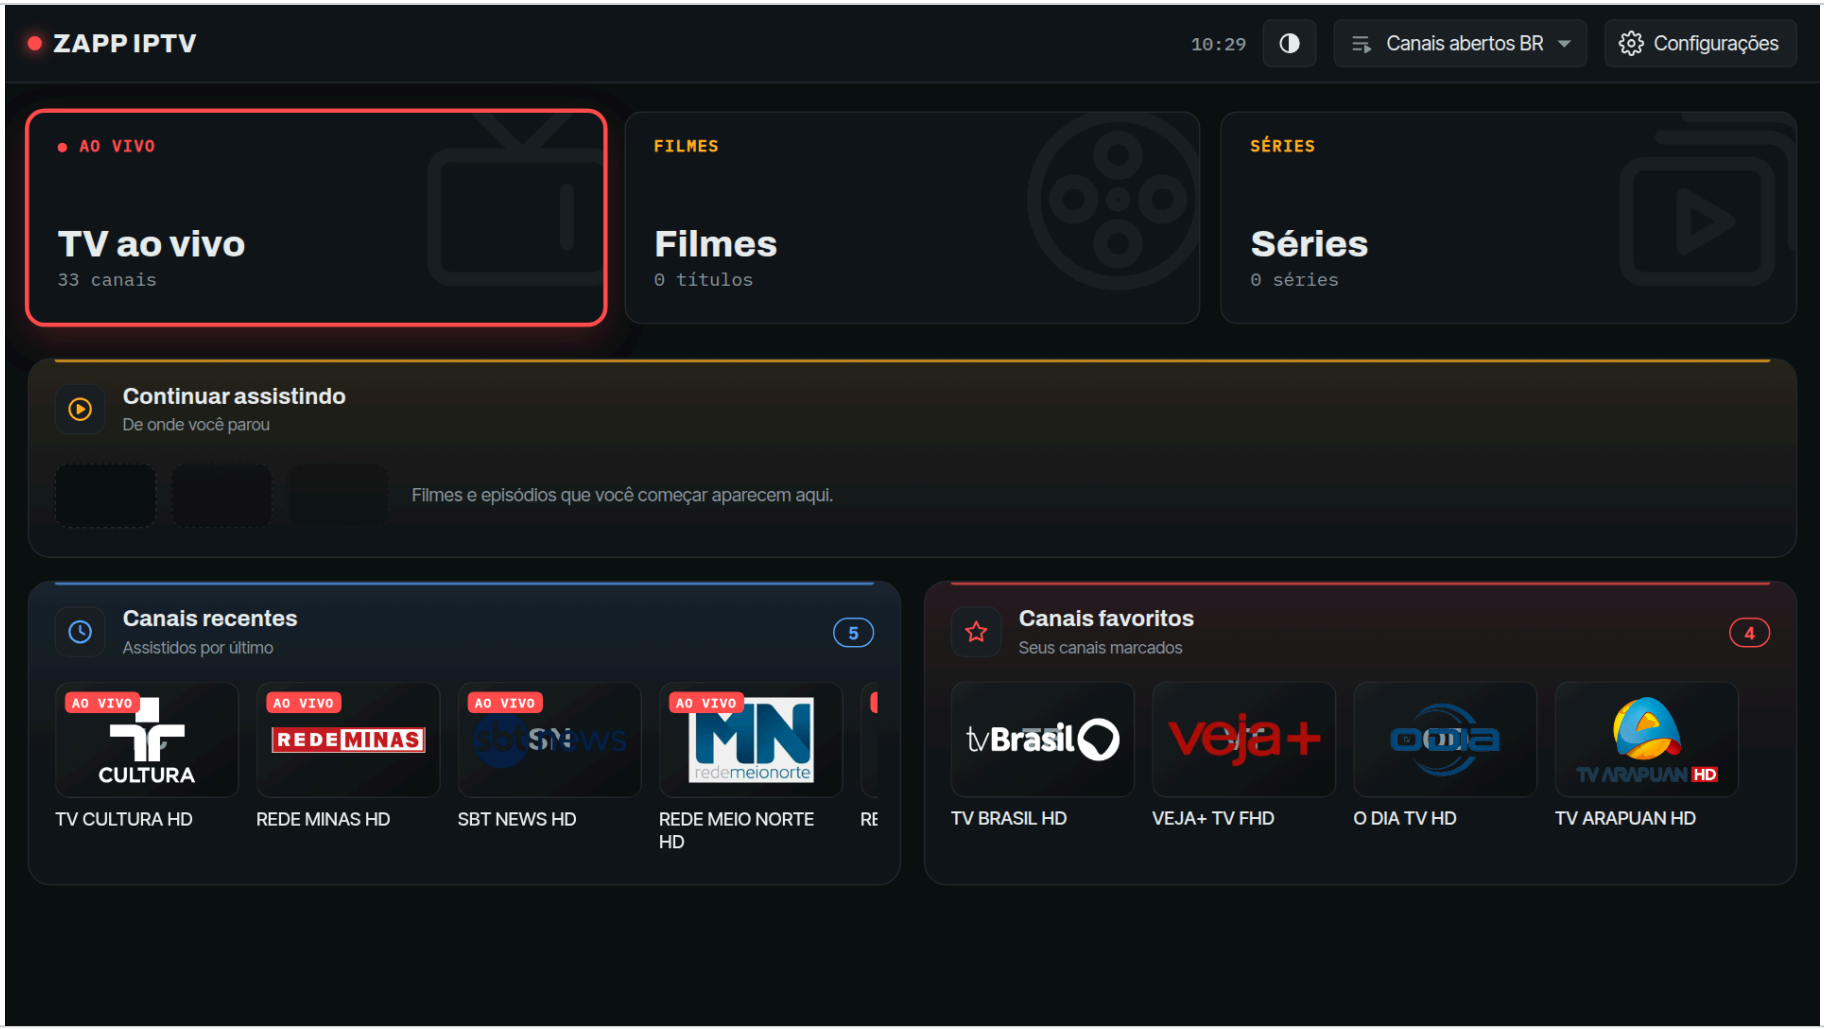

## Remote control

| Key | Action |
|---|---|
| Arrows / OK | Move focus / open the focused item |
| Back | Closes one level at a time (dialog, side panel, controls, player, section); on Home asks to exit |
| Left / Right in player | Change channel (live) or seek 10 s (movies/episodes) |
| Up / Down in player | Show controls and the channel card |
| Channel + / -, numbers | Change channel / go to channel number |
| Red / Green / Yellow | Channel list / program guide / favorite |
| Play, Pause, Stop, FF, RW | Playback control |

## Authentication

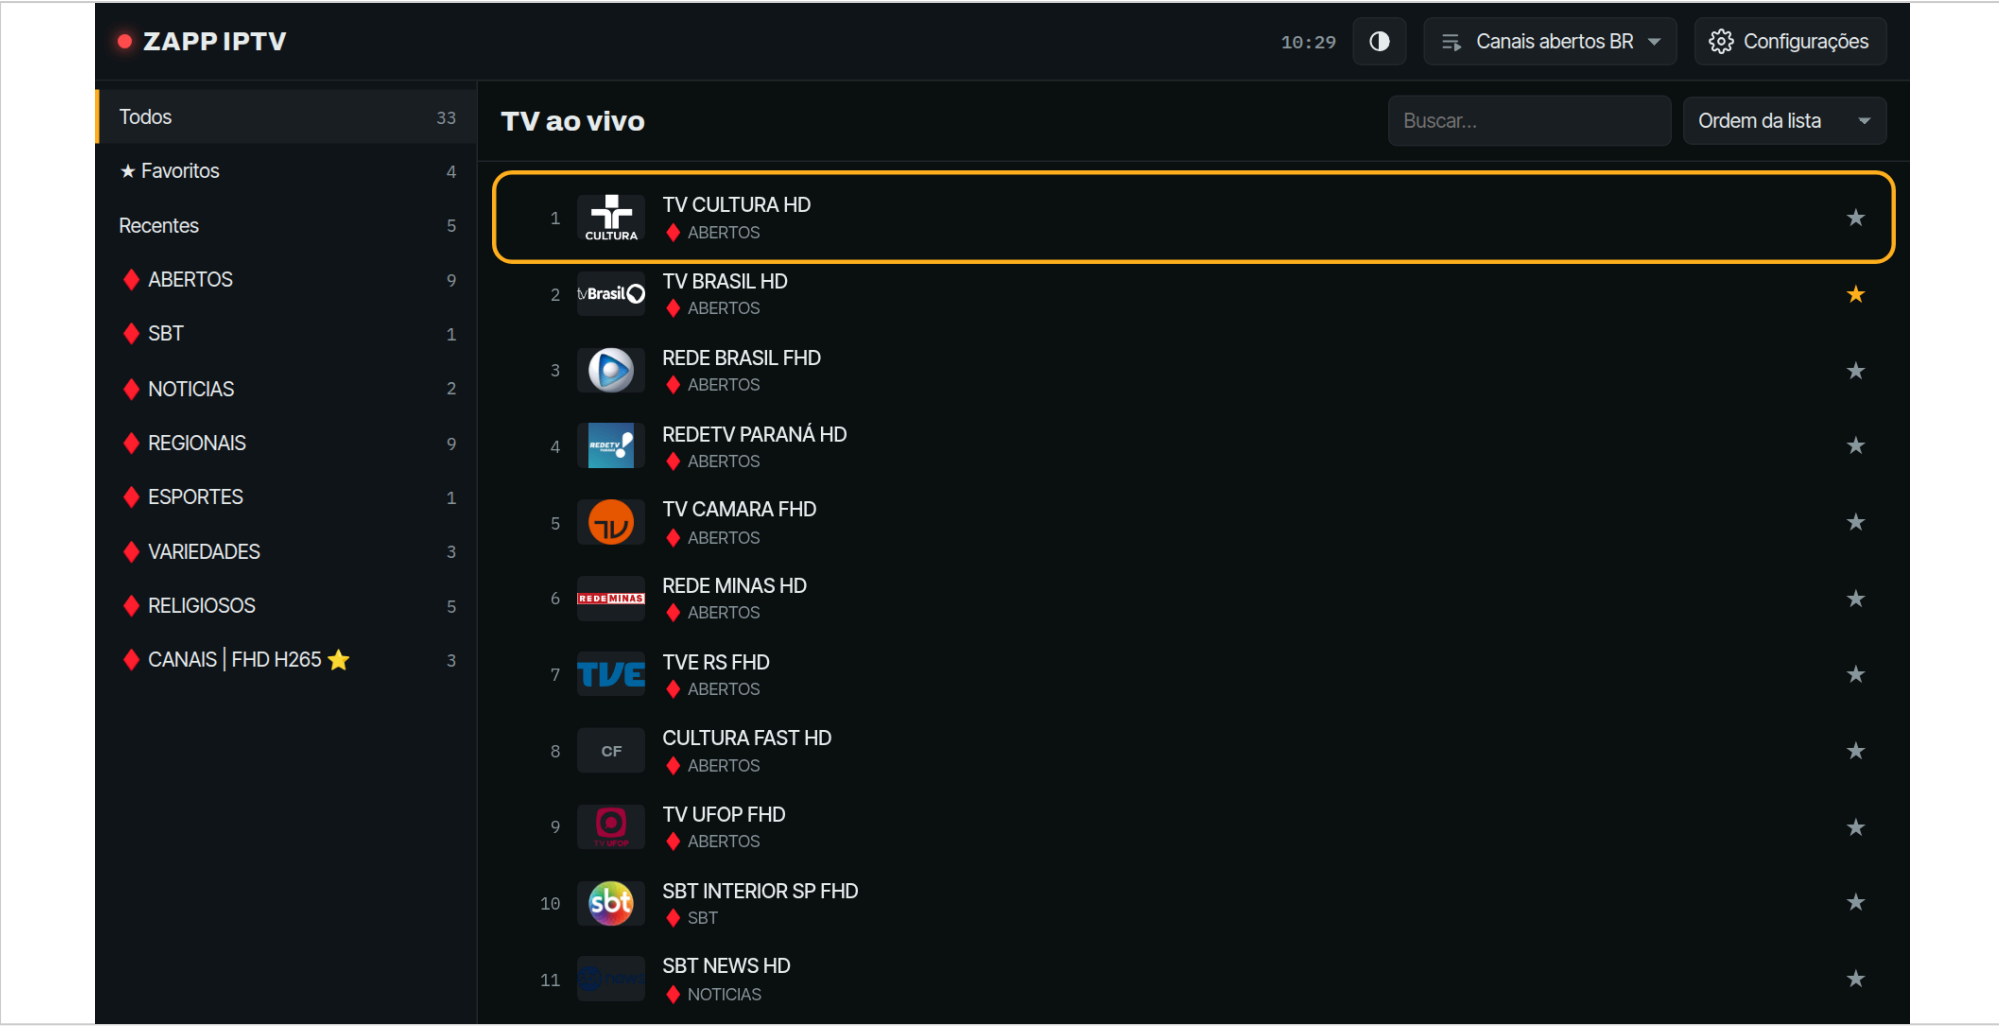

None. No account, login or payment is needed. Optional parental control PIN (default 0000) can lock categories.

## 1. Home

Opens after the intro animation with the sample playlist of free public channels already loaded. Focus starts on "Live TV". Arrows move between Live TV / Movies / Series and the Continue watching, Recent channels and Favorite channels shelves. OK opens the focused item. Back on this screen asks "Exit Zapp IPTV?" (Cancel / Exit).

## 2. Live TV - channel list

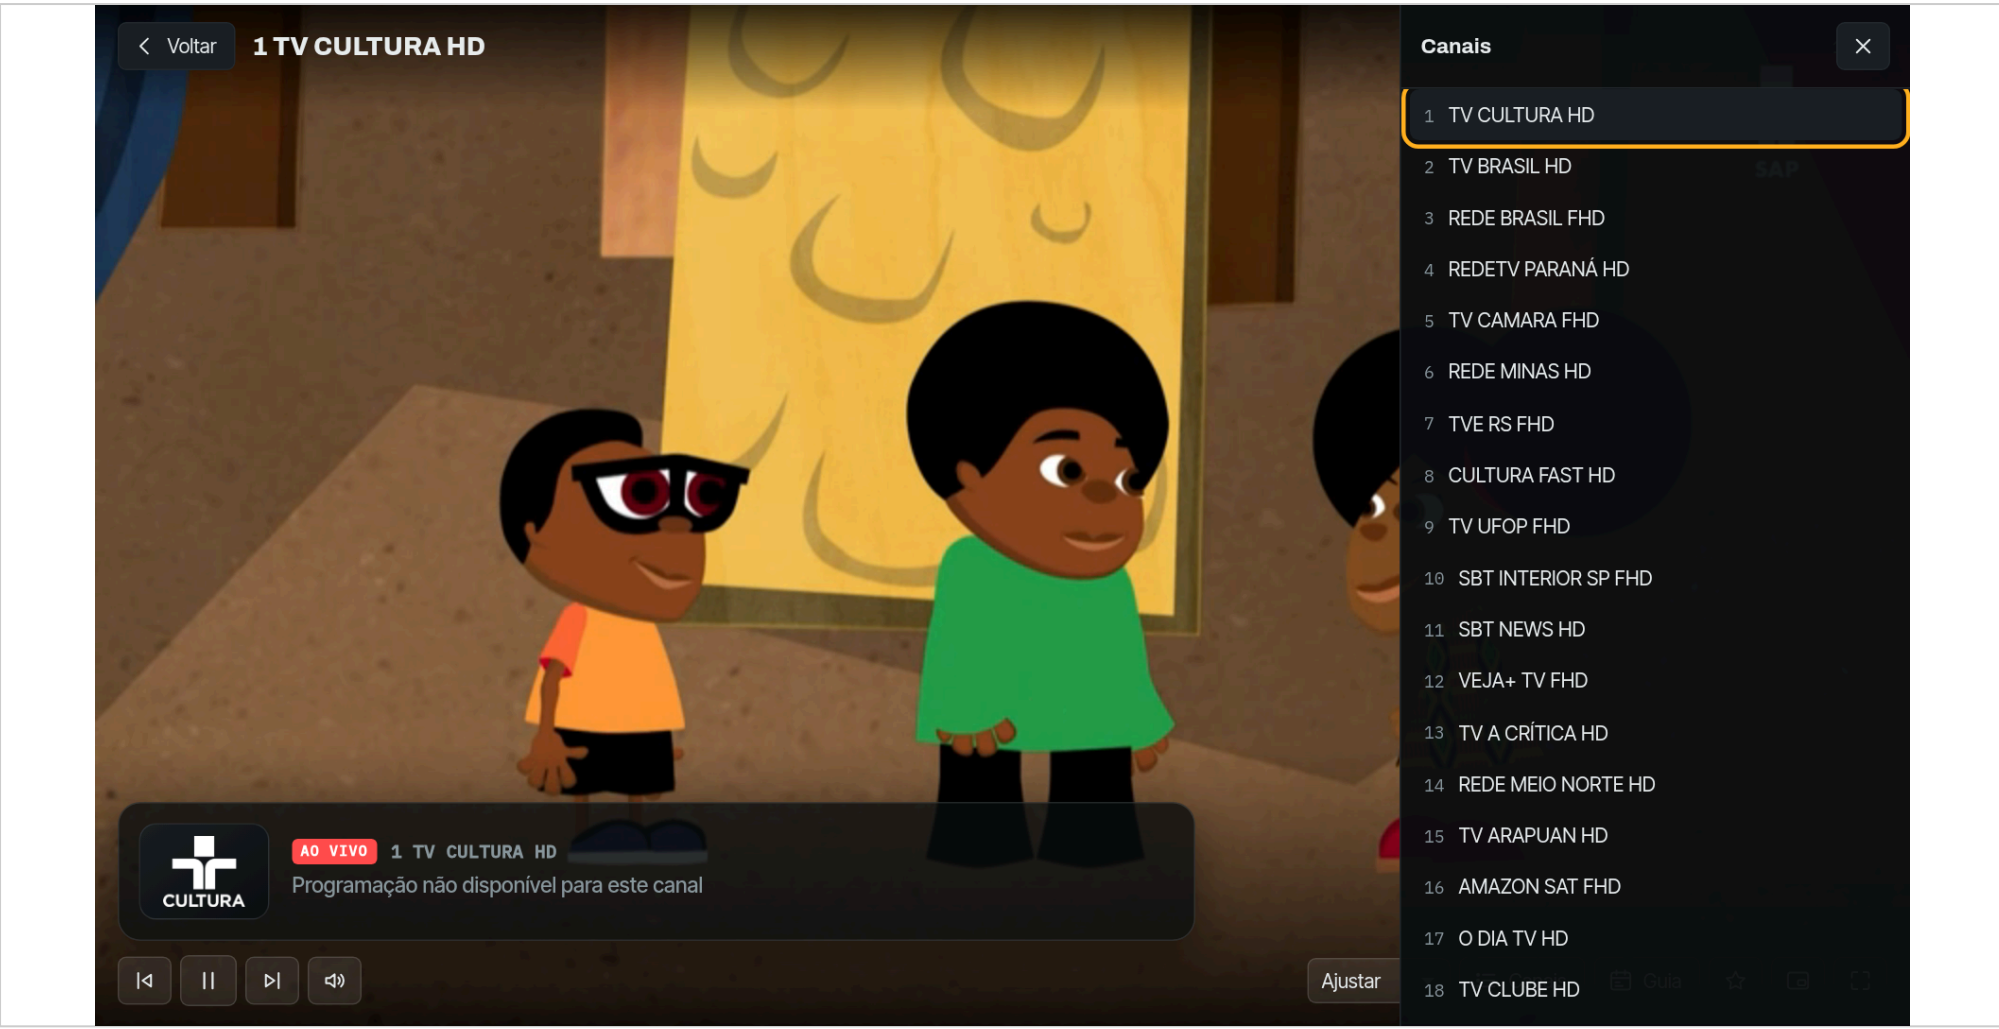

Categories on the left, channels on the right. Up/Down moves through channels, Left/Right switches between categories and the list, OK starts playback, the Yellow key adds/removes a favorite. Back returns to Home.

## 3. Player

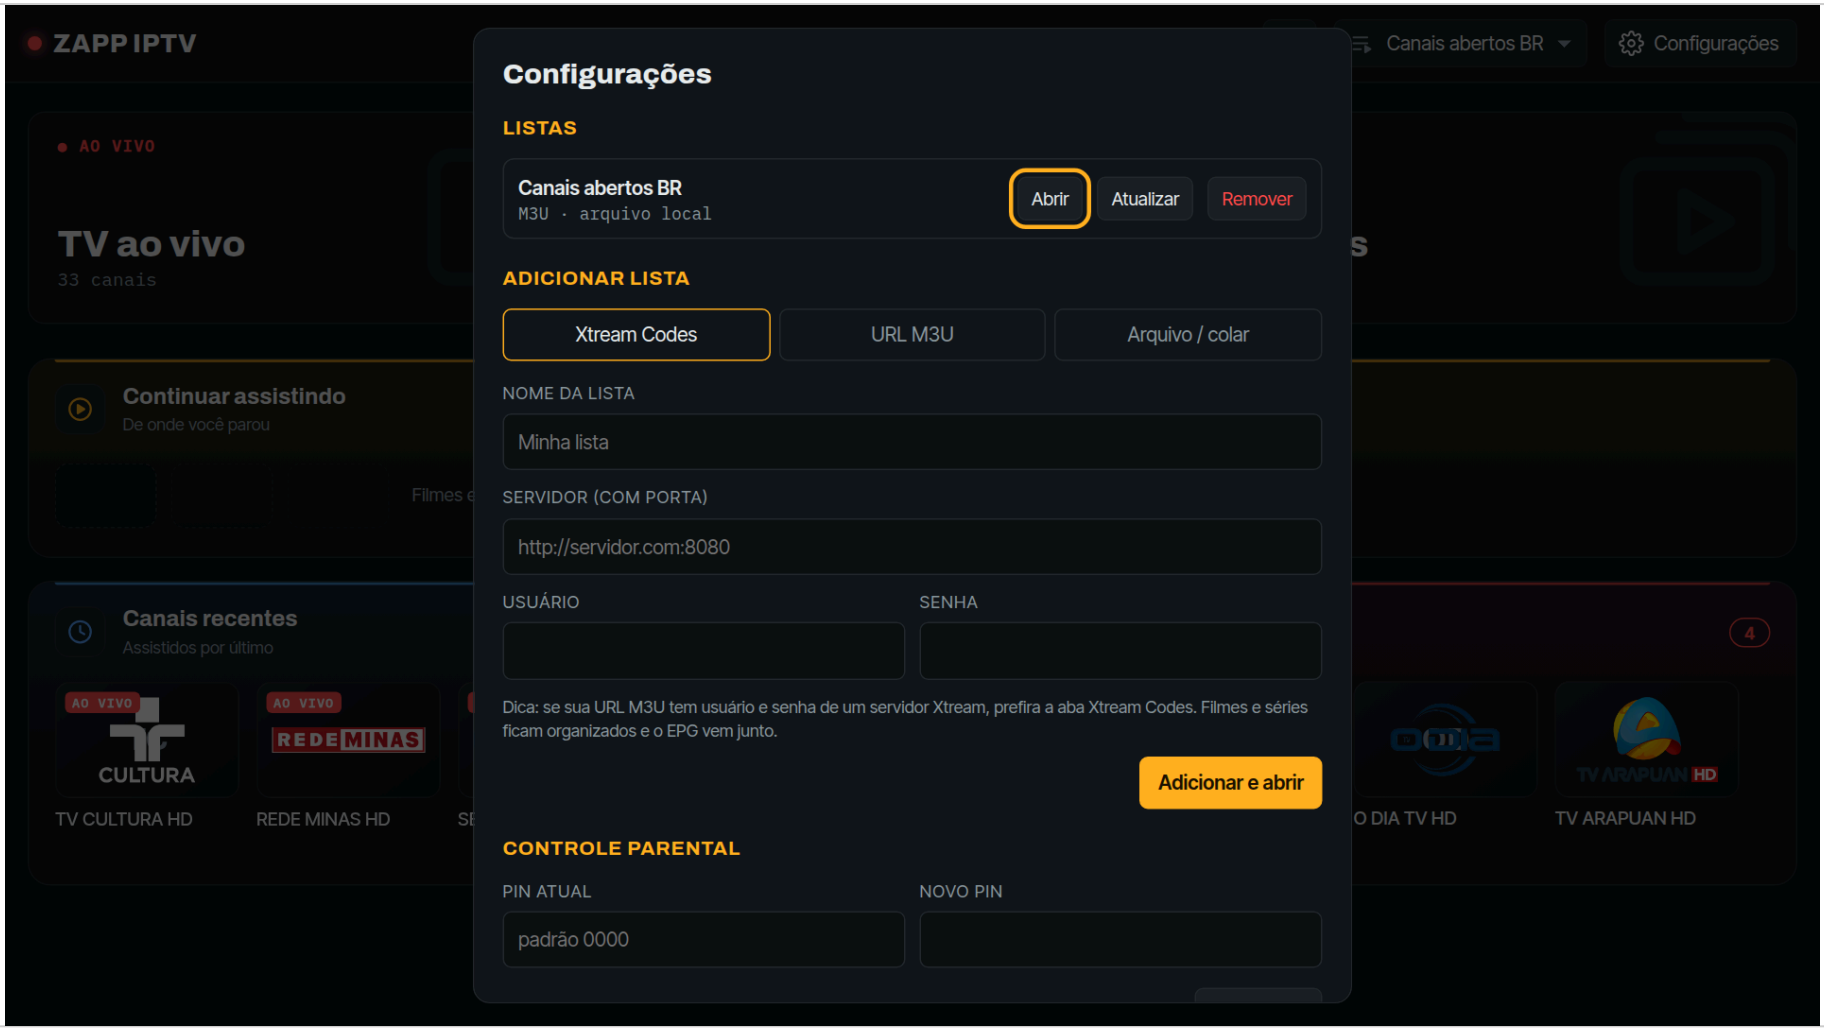

Full-screen live playback. Left/Right and Channel +/- change channel; number keys jump to a channel. Up/Down shows the controls and the channel card (current program, progress, next program); controls hide after 5 seconds. Play/Pause/Stop/FF/RW keys control playback. Back hides the controls, then closes the player.

## 4. Player - channel list (Red key)

The Red key opens the channel list on the side; Up/Down and OK switch channel without leaving the player. The Green key opens the program guide. Back closes the side panel.

## 5. Settings - playlists

Settings (gear icon) manages playlists: Xtream Codes login or M3U URL. Text fields open the on-screen keyboard only when OK is pressed (OK again confirms). No login is required to use the app: the sample playlist works out of the box.
